INDEX OF AUTHORS

Page numbers in italics refer to abstracts of papers given at a meeting of the Genetical Society and to titles of books reviewed.

Adams, T. H., 155
Al-Banna, M. K. S., 275–278
Albersheim, P., *158*
Alberman, E., *146*
Anwar, M. M., *148–149*
Ashburner, M. (Ed.), *140–141*
Aylmore, R. C., *155*

Baban, D. F. A., 105–110
Barratt, J. C., *146*
Barton, N. H., 279–282, 367–383
Batchelor, Sheila, 27–34
Bennett, M. D. (Ed.), *443–444*
Birley, A. J., 185–196
Blackman, R. L. (Ed.), *140–141*
Bobrow, M. (Ed.), *443–444*
Bond, D. J., *145*
Boorman, S. A., *139–140*
Boughey, H. J., 275–278
Bownes, M., *153*
Brookfield, J. F. Y., 297–315
Brown, A. H. D., 1–15
Buckton, K. E., *147*
Bull, J. J., 173–184, 347–365
Bulmer, M. G., 197–207, 347–365
Bundey, S., *147–148*

Caligari, P. D. S., 17–26, 79–85, 105–110
Casselton, L. A., *149–150*
Caten, C. E., *149*
Chakraborty, R., 259–262
Chambers, G. K., 385–396
Chandley, A. C., *148*
Chesterton, C. J., *157*
Chase, D. S., *154*
Ciba Foundation, *141–142*
Clements, J., *155*
Couch, P. A., 185–196
Croft, J. H., *148–149, 154*
Cullis, C. A., 87–94

Dales, R. B. G., *154*
Darvill, A. C., *158*
David, J. R., 263–268
Dearn, J. M., 111–119
De Salle, R., 439–442
De Scheemaeker-Louis, M., 263–268
Dickinson, H. G., *156*
Douglas, C., 275–278
Dover, G. A., *157*

Economou, A., *149–150*
Edgar, L. A., 95–103
Edwards, K. J. R., *152*
Eriksson, A. W. (Ed.), *444*

Farr, J. A., 237–248
Fernandez-Piqueras, J., 397–401
Forsius, H. R. (Ed.), *444*
Frankel, O. H., *444–445*
Futuyma, D. J., 161–172

Geoghegan, C., *154–155*
Gillerot, Y., *148*
Greenwood, J. J. D., 27–34

Hahn, M. G., *158*
Haley, C. S., 221–236
Harberd, N. P., *152*
Harnden, D. G., *147–148*
Harris, H., *290–291*
Harrison, F. L., *157*
Hartmann-Goldstein, I., 337–345
Hewitt, G. M. (Ed.), *140–141, 443–444*; 367–383
Hirai, H., 249–252
Hodgson, B., *158*
Houghton, J. A., *154–155*
Howard, H. W., 135–137
Howell, W. M., *151*
Hulten, M. A., *147*
Hutchinson, J., *152–153*

Imai, H. T., 249–252
Ingram, N. R., 17–26, 317–326

Jain, S., 35–52
Jessop, A. P., *153*
Jinks, J. L., 17–26, 253–258, 275–278, 317–326
Johnson, M. S., 121–133
Jones, B. W., 269–274
Jones, G. H., 95–103, 409–416
Jones, R. N., *152*

Karlin, S., 209–220
Karp, A., *152*
Koliantz, G., 337–345
Koltin, Y., *155–156*
Koulischer, L., *148*

Ladizinsky, G., 431–438
Lamb, B. C., *151*
Lanham, P., *154–155*
Last, K., 221–236
Lawrence, M. J., 53–61

Lawrie, D. A., 409–416
Leipertz, S. L., 161–172
Levitt, P. R., *139–140*
Lhoas, P., *150*
Londsdale, D. M., *152, 152–153*
Lyon, G. D., *158*

Macnair, M., *153*
McNeil, M., *158*
Mafi, S., *151*
Majumder, P. P., 259–262
Marshall, D. R., 1–15
Marson, A., 185–196
Mayo, O., *291–292*
Mikkelsen, M., *145–146*
Mitter, C., 161–172
Morgan, Joan, (Ed.), *283–290*
Morten, D. E. N., *147–148*

Nevanlinna, H. R. (Ed.), *444*
Norio, R. K. (Ed.), *444*

Oakshott, J. G., 385–396
O'Brien, P., *154–155*
O'Donald, P., 63–77, 209–220
O'Donnell, S., 53–61
Ohmann, J., 425–429
Olby, R., *157*
Oliver, J. L., 403–407
Owen, M. J., *156*

Palmer, R. W., *147*
Parker, J. S., 95–103
Parry, J., *146*
E. M., *146*
Pla, E., 263–268
Pooni, G. S., 317–326
Pooni, H. S., 253–258
Purdom, C. E., 269–274
Puttick, A. H., *155*

Ritland, K., 35–52
Roberts, S., *153*
Rojo Garcia, E., 397–401
Ruiz-Rejon, M., 403–407

St. Lawrence, I., 63–77
Sakaguchi, Y., 249–252
Searle, A. G., *145*
Sentis Castano, C., 397–401
Sharp, J. K., *158*
Soule, M. E., *444–445*
Speed, R. M., *148, 154*

Taylor, P. D., 197–207
Templeton, A. R., 439–442
Thompson, D., 269–274
Thompson, J. N. Jr., 327–335
Todd, N. K., *150, 155*
Toro, M. A., 417–423

Valent, B. S., *158*
Van Herrewege, J., 263–268
Virk, D. S., 317–326

Walbot, V., 439–442
Whalley, L., *147*
Whelan, W. H. (Ed.), *283–290*
Whitehouse, C., 95–103
Williams, E. N. D., *150–151*
Williams, N. D., *155*
Willcocks, D. A., 385–396
Wood, Elizabeth, M., 27–34
Woodward, M. D., *158*
Workman, P. L. (Ed.), *444*
Woodruff, R. C., 327–335

INDEX OF SPECIES

Page numbers in italics refer to the subjects of the paper.

Acacia, 122–132
Acer rubrum, 162, 163
Adalia bipunctata, 209, 210
Aedes aegypti, 359
Alchornea ilicifolia, *1–15*
Alsophila pometaria, *161–172*
Antirrhinum, 367
Ascobolus immersus, *151*
Aspergillus amstelodami, *149*
  fonsecaeus, 150
  nidulans, *148–149*, 149, *154*
  niger, *150*
Armadillidium vulgare, *135–137*

Baetica, 398
barley, *152*
Betula lenta, 162
Black Oak, see *Quercus velutina*
Biston betularia, 209
Bombina bombina, 381
  variegata, 381
Bosmina longirostris, 299, 300

Caledia, 141
  captiva, *279–282*, 381
Callicrania seoanei, *397–401*
Catastomus clarkii, 299
Cepaea hortensis, 102
  nemoralis, 102, 121, 131, 136, 209
Cerion abacoense/bendalli, 279
Chorthippus brunneus, *409–416*
  parallelus, 102, 117
Chortoicetes terminifera, 117
Coprinus cinereus, *149–150*
Coriolus versicolor, *150–151*
Crepis capillaris, *95–103*
Culex pipiens fatigans, *425–429*

Danaus cnrysippus, 33, *76–77*,
Daphnia longispina, 299
  magna, *297–315*
  obtusa, 311
  pulex, 299, 300
Dichroplus silveiraguidoi, 397
Dicrostonyx ssp. 349–350
  groenlandicus, 349, 350, 353, 355, 359
  torquatus, 349, 350, 353, 359
    chionopaes, 350, 355
    torquatus, 355

Drosophila, 141, 155, *327–335*, 367
  ananassae, 298
  hydei, 343
  melanogaster, *79–85*, *105–110*, 140, *153*, 180, *185–196*, *263–268*, 298, 299, 327, 328, 329, *337–345*, *385–396*
  persimilis, 367
  pseudo-obscura, 298, 367
  simulans, 367

Escherichia coli, *153*, 285, 286, 312

Festuca pratensis, 102
Flax, *87–94*

Gallus gallus, 29
Glossina, 157
Gilia, 367

Heliconius erato, 28
Helix aspersa, 131
Humans, *145–146*, *146*, *147*, *147–148*, *221–236*, *290–291*, 351, *417–423*
Hypolimnas misippus, 209, 210

Lebistes, see *Poecilia*
Limnanthes, 35
  alba, 49
Locusta migratoria, 412
Lolium italicum, 102
  perenne, 102, *152*

maize, *152*
mammals, *347–365*
man, see Humans
Metrioptera brachyptera, 102
Mimulus guttatus, *153*
mouse, *148*, *154*, 157
Mus musculus/domesticus, 279, 381
Muscari comosum, *403–407*
Myopus schisticolor, 347, 359, 361–363
Myrmeleotettix maculatus, 102

Nicotiana rustica, *17–26*, *253–258*, *275–278*, *317–326*

Octolasion tyrtaeum, 161
Oenothera organensis, *58–59*
Olearia axillaris, 122–132
Omocestus viridulus, 102
Operophtera brumata, 162

Panaxia dominula, 136
Papaver rhoeas, *53–61*
Papilio dardanus, 209, 210
  memnon, 209
Paragonimus kellicotti, 249
  ohirai, *249–252*
Paratettix texanus, 117
Paratylotropidia beutenmulleri, 400
Passer domesticus, 28
Pelargonium, 122
Phaulacridium marginale, 102
  Vittatum, *111–119*
Pleuronectes platessa, *269–274*
Philomachus puguax, 210
Podisma pedestris, 141, 279, *367–383*
Poecilia reticulata, 210, *237–248*
Primula sp. 12
Pseudophryne bibroni, 279, 378
  semimarmorata, 279, 378
Pycnogaster cucullata, 397, 398

Quercus coccinea, 162
  Velutina, 162, 163

Rattus norvegicus, 249
rodents, 157
red maple, see *Acer rubrum*

Salmo gairdneri, 269
Schistocerca gregaria, 412
Seinura tenuicaudata, 180
Sesarma dehaani, 249
Simocephalalus exspinosus, 299
  serrulatus, 300
Steropleurus, 398
Stethophyma grossum, 412
Sturnus vulgaris, 28
Synechocystis PCC 6308, *154–155*

tettigonioidea, 397
Theba pisana, *121–133*
Thereuopoda clunifera, 397
Thereuonema hilgendorfi, 397
Triticum longissimum, 102
Turdus merula, 28

Varying lemmings, *349–362*
Vicia sativa, *431–438*

Warramaba virgo, 397
wheat, *152–153*
Wood lemmings, 347–348

INDEX OF SUBJECTS

age, parental, effect of on chaeta number, 105–110
anaesthetics and non disjunction in *Drosophila*, 155
analysis of genetic models, 63–77
aneuploidy, origins of, 145, 145–146,
  human, 146
  in Alzheimer's disease, 147
  induction in mouse germ cells, 148
apomixis, evolution of, 1–15

biased sex ratios in guppies, 237–248
birth control and sex preference, 417–423

changes in rDNA in flax induced by environment, 87–94
chiasma distribution at meiosis, 147
  in grasshoppers, 409–416
  variation in, in ryegrass, 152
  in *Crepis*, 95–103
chromosome polymorphisms in *Muscari*, 403–407
  13 and retinoblastoma, 147
clonal variations in cankerworm, 161–172
colour pattern polymorphisms in grasshoppers, 111–119
complex carbohydrate function in plants, 158
control of ADH in *Drosophila*, 185–196
conversion control factors in *Ascobolus*, 151
crossing-over in *Culex*, 425–429
cytogenetics, insect, 140–141
  population, in *Crepis*, 95–103

distasteful prey, selection of by predators, 27–34
DNA sequence in wheat, 152–153
dominance and models of sexual selection, 209–220
Drosophila ADH and detoxification of secondary alcohols, 263–268

enzyme activity, variation for, in *Drosophila*, 185–196
equilibrium sex ratios, technique for calculating, 205
estimation of outcrossing rate, 35–52
  phenotypes in *Drosophila*, 79–85
evolution, molecular rates of, 439–442
  of apomixis, 1–15
    sex determination, 173–184
    XY females in mammals, 347–365
excision repair of FUV damage in a cyanobacterium, 154–155

flax, induced changes in, 87–94
frequency dependent mating, 63–77
  selection in the water flea, 297–315
fungal individualism, 150, 155

gene frequencies, 35–52, 259–262, 385–396
  suppression, 337–345
  transfer in *Nicotiana*, 17–26
genetical control of vegetative incompatibility, 148–149
  recombination, role of, in natural populations, 95–103
  theory of natural selection, 157
genetic analysis in gynogenetic diploids in Plaice, 269–274
  of a mutant in *Drosophila*, 153
  basis of hybrid inviability, 367–383
  control of alcohol dehydrogenase in barley, 152
  determination of population structure, 150–151
  effects of anti-cancer drugs in yeast, 155
  factors in recovery of spontaneous mutants in *E. coli*, 153
  models with frequency dependent matings, 63–77
  variability in *Muscari*, 403–407
genetics of copper tolerance in *Mimulus*, 153
  self-incompatibility polymorphism in poppies, 53–71
genotypic sex determination, 173–184

heterokaryon incompatibility in *Aspergillus*, 149, 154
  presumptive, in *Aspergillus*, 150
heterozygotes deviation, 259–262
  in synthetic populations of *Nicotiana*, 275–278
hierarchical analysis, 317–326
human variation, analysis of, using twins, 221–236
hybrid inviability in grasshoppers, 367–383
  zone, width of, in *Caledia*, 279–282
hybridization in *Vicia sativa*, 431–438

incompatibility control in *Coprinus*, 149
  in poppies, 53–61
induced changes in flax, 87–94
  quantitative variation, 317–326
irradiated pollen, use of, to induce matromorphy, 17–26

latitude relations and gene frequencies, 385–396

matromorphy, induced in *Nicotiana*, 17–26
meiotic pairing in mouse fetal ovary, 154
migration and habitat choice in snails, 121–133
mitochondrial genome in maize, mapping of, 152–153
models of sexual selection, 209–220
molecular aspects of cell-cell recognition, 157
  basis for self-incompatibility, 156
  evolution from genetic distances, 439–442
  rearrangements in eukaryote genomes, 157
  variation in control of ADH activity, 185–196
multilocus outcrossing, 35–52
mutation in *Coprinus*, 149
  Drosophila, 327–335

neo XY sex pair, structure of, 397–401
non-allelic interactions in *Nicotiana*, 253–258

optimal phenotypes in *Drosophila*, 79–85
outcrossing, estimation of, 35–52

parental age and chaeta number, 105–110
phenotypes of maximum dominance in *Drosophila*, 79–85
polymorphism in grasshoppers, 111–119
  in Japanese lung fluke, 249–252
  in *Muscari*, 403–407
  in terrestrial isopod, 135–137
  self-incompatibility, genetics of, 53–61
population cytogenetics of *Crepis*, 95–103
position effect in *Drosophila*, 337–345

recognition phenomena in fungi, 155–156
  systems in *T*-cells, 156
retinoblastoma and chromosome 13, 147

selection, between *Daphnia* clones, 297–315
  effects of, 6
  of distasteful prey, 27–34
  sexual, models of, 209–220
self-incompatibility in angiosperms, 156
sex chromosomes and gene suppression, 337–345
  determination, evolution of, 173–184
  determining mechanisms, 397–401
  preference and sex ratio, 417–423
  ratio in man, 417–423
    in social hymenoptera, 197–207
  ratios, biased, in guppies, 237–248
shell banding frequencies in snails, 121–133
speciation and rates of molecular evolution, 439–442
spontaneous mutation and transposing elements, 327–335

tandem fusion origin of neo XY sex pair, 397–401
terrestrial isopod, polymorphism in, 135–137
translocation heterozygotes in *Culex*, 425–429
trisomy 21 maternal age, 148
triple test cross, 317–326
tumour promoters in yeast, 146
twin analysis of human variation, 221–236

variation, chiasma, in *Crepis*, 95–103
  clonal, in cankerworm, 161–172
  genetical, for enzyme activity, 185–196
  human, twin analysis of, 221–236
  in chiasma distribution in grasshoppers, 409–416

worker-queen conflict in social hymenoptera, 197–207

XY females in mammals, 347–365
